Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, claims 1-5, in the reply filed on 01/06/2006 is acknowledged.
2. Claims 6-20 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to nonelected groups, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Sanchis (2,337,276).

The Sanchis reference discloses a fluid transfer fitment comprising: a cap portion 10 having a first fluid transfer opening; an engaging segment 14 wherein the engaging segment 14 extends from the first fluid transfer opening of the cap portion 10 and wherein the engaging segment 14 comprises a wall defining a cavity and a second fluid transfer opening in fluid communication with the first fluid transfer opening; and a fluid transfer check valve 34 for controllably preventing a fluid from flowing through the fitment, wherein the fluid transfer check valve 34 is connected to the engaging segment

Art Unit: 3751

14 and wherein at least a portion of the fluid transfer check valve 34 is located within the engaging segment 14.

Regarding claim 2, the fitment comprises a fluid filled reservoir 13 having a finish portion 12 wherein the cap portion 10 is releasably attached to the finish portion 12 and wherein the fluid filled reservoir 13 is inverted.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sanchis (2,337,276) in view of Jermyn (5,655,686).

The Sanchis reference discloses the cap portion 10 comprises a vent opening in fluid communication with the outside atmosphere. Although the Sanchis reference does not disclose a vent valve in fluid communication with the vent opening, the Jermyn reference which teaches a vent valve is a check valve 53 or 54.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a vent valve on the Sanchis fluid transfer fitment in view of the teaching of the Jermyn reference to control air flow from the atmosphere to interior of the reservoir to establish equalization of pressure.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Barber teaches a fluid transfer fitment comprises a cap portion, engagement segment and a check valve.
